As a contractor, your favorite backfill is always going to be the fastest and least expensive. But, if your customer is a municipality or utility, their concern for proper soil compaction can turn your least expensive solution into the most expensive. Consider FLOWABLE FILL.

Compacting soil backfill or filling hard to reach locations can be tough work. Consider FLOWABLE FILL. It eliminates compacting, reaches hard to reach access areas easily, reduces in-place costs, fills holes in the ground quickly and virtually eliminates the call back hassles due to soil settlement.

Renting equipment used to backfill dirt can be costly. Consider FLOWABLE FILL. Unlike compacted dirt, Flowable Fill requires no placing of lifts, tamping or compacting.

**CHOOSE FLOWABLE FILL
by Ready Mixed Concrete Co.**

**Flowable Fill
Self-Compacting
Concrete**

Flowable Fill is a highly flowable backfill that can spread into place under its own weight and achieve excellent compaction without internal or external vibration. Also, Flowable Fill will not incur any defects due to segregation or bleeding.

Filling it up with FLOWABLE FILL

RMCC Regional Locations

ADVANTAGES-

Flowable Fill has excellent fluidity with high resistance to segregation, is highly workable, and meets new demands in commercial, industrial, and residential applications to achieve the highest level of performance. The following special qualities are also provided:

- ◆ Placement of concrete *without* vibration translates into a tremendous savings in labor
- ◆ Exhibits minimal to no bleeding
- ◆ Very cohesive and resists segregation, even with highly fluid, high w/c ratio mixes
- ◆ Improved Safety—eliminates the need for people in trenches and voids

- ◆ Improved productivity, increased efficiency of labor, and improved cost efficiency of production process.

- ◆ It places quickly, flows into every crevice, and is self-leveling.
- ◆ Can be placed during most weather conditions, even in trenches with standing water
- ◆ Supports weight and traffic better than soil fill, yet is easily dug up when necessary. Strengths of 50-150psi are excavatable.
- ◆ Does not settle and eliminates road ruts, resulting in fewer call-backs
- ◆ Free-flowing and self-leveling
- ◆ Can accept overlay material in 1-3 days, depending on weather

WHERE TO USE-

Flowable Fill is also recommended in applications where minimal to no segregation of mixes during placement is required.

Flowable Fill is beneficial in applications where water retentivity (bleed water) is a concern.

NOTE-expect a 1/4" shrinkage for every foot of material.
